Release : ECO2 Digital Actuator + App

Publication : PHPI

Issue : November 2017

### **DANFOSS**

#### *Eco*

The second-generation Eco radiator thermostat from Danfoss has arrived. The new Eco is said to provide effortless heating control using the Danfoss Eco App to program individual radiator thermostats via Bluetooth. Offering an easy and cost-effective transition to intelligent heating for homes and small commercial premises, Eco offers potential savings of up to 30% on heating bills. In addition to the energy saving benefits for end-users, Danfoss Eco is purpose-designed to be fast and simple to install in new and replacement applications.

## Remotely manage radiator valves

The second-generation Eco radiator thermostat from Danfoss provides heating control using the Danfoss Eco app to programme individual radiator thermostats via Bluetooth. It is said to offer an easy and cost-effective transition to intelligent heating for homes and small commercial premises.

The app enables users to program the heating to suit their daily schedule and keep rooms comfortably warm when occupied, and cooler when empty. Eco thermostats can be programmed individually from a smartphone from a distance of up to 10m. Eco can be adjusted manually using the turn-wheel option.

According to Danfoss Marketing Director Bjorn Sejr Nielsen, the second-

generation Eco is the perfect plug-and-play solution for all kinds of domestic and small commercial radiator heating systems. He comments: "Together, our new Eco radiator thermostat and app enable end-users to experience some of the key benefits of intelligent heating for a relatively low investment cost. Eco ensures optimum comfort and potential savings of up to 30% on heating bills."

The new Eco radiator thermostat is compatible with 90% of all radiator valves. This makes it suitable for upgrading existing installations, either as a replacement on all radiators for maximum energy savings, or starting with just the one.

### Eco approach

The new Eco provides effortless heating control using the *Danfoss Eco* app to program individual radiator thermostats via Bluetooth technology. Offering an easy and cost-effective transition to intelligent heating for homes and small commercial premises, Eco ensures optimum comfort and potential savings of up to 30% on heating bills. In addition to the energy saving benefits for end-users, Danfoss Eco is purpose-designed to be quick and simple to install.

The *Danfoss Eco* app makes it easy for end-users to program the heating to suit their daily schedule. Having downloaded the app and activated Bluetooth, Eco thermostats can be programmed individually from a smartphone from a distance of up to 10 metres. Alternatively, Eco can be adjusted manually using the turn-wheel option.

As a further benefit, the new Danfoss Eco radiator thermostat is compatible with 90% of all radiator valves, making it ideal for upgrading existing installations.

### Intelligent heating made simple with the Danfoss Eco App

The new Eco provides effortless heating control using the Danfoss Eco App to programme individual radiator thermostats via Bluetooth technology. Offering an easy and cost-effective transition to intelligent heating for homes and small commercial premises, Eco ensures optimum comfort and potential savings of up to 30% on heating bills.

In addition to the energy saving benefits for end-users, Danfoss Eco is purpose-designed to be fast and simple to install by a professional heating installer in new and replacement applications. The Danfoss Eco App makes it easy for end-users to programme the heating to suit their daily schedule.

Having downloaded the App and activated Bluetooth, Eco thermostats can be programmed individually from a smartphone from a distance of up to ten metres: a red light is illuminated on the thermostat to indicate successful connection.

Alternatively, Eco can be adjusted manually using the turn-wheel option. Danfoss Eco radiator thermostat is compatible with 90% of all radiator valves. This makes it an ideal solution for upgrading existing installations, either as a replacement on all radiators for maximum energy savings, or starting with just the one.

The Danfoss Eco also boasts best-in-class noise performance at less than 30dBA. [www.heating.danfoss.co.uk](http://www.heating.danfoss.co.uk)

### Intelligent Heating Made Simple With New Danfoss Eco

By Admin | Danfoss | 17th Jul 2017

Tweet

The second-generation Eco radiator thermostat from Danfoss has arrived. The new Eco provides effortless heating control using the Danfoss Eco App to program individual radiator thermostats via Bluetooth technology. Offering an easy and cost-effective transition to intelligent heating for homes and small commercial premises, Eco ensures optimum comfort and potential savings of up to 30% on heating bills. In addition to the energy saving benefits for end-users, Danfoss Eco is purpose-designed to be fast and simple to install by a professional heating installer in new and replacement applications.

The intuitive Danfoss Eco App makes it easy for end-users to program the heating to suit their daily schedule and keep rooms comfortably warm when occupied, and cooler when empty. Having downloaded the App and activated Bluetooth, Eco thermostats can be programmed individually from a smartphone from a distance of up to 10 metres: a red light is illuminated on the thermostat to indicate successful connection. Alternatively, Eco can be adjusted manually using the turn-wheel option.

As a further benefit, the new Danfoss Eco radiator thermostat is compatible with 90% of all radiator valves. This makes it an ideal solution for upgrading existing installations, either as a replacement on all radiators for maximum energy savings, or starting with just the one. And on top of all its innovative features, Danfoss Eco also boasts best-in-class noise performance at less than 30dBA.

According to Danfoss Marketing Director, Bjorn Sejr Nielsen, the second-generation Eco is the perfect plug-and-play solution for all kinds of domestic and small commercial radiator heating systems. He comments: "Together, our new Eco radiator thermostat and App enable end-users to experience some of the key benefits of intelligent heating for a relatively low investment cost."

Danfoss is a leading manufacturer of world-class heating products for the residential and commercial markets, with factories throughout Europe, including in the UK and Denmark. Products range from domestic heating controls such as programmers, thermostats and TRVs to balancing valves, pressure and flow controllers, heat exchangers and energy meters for district and commercial heating applications. The company's extensive product range is supplied through a national network of stockists. A comprehensive range of customer support services is also available, including installer training courses, CPD seminars and the Danfoss Assist mobile website at [www.Assistyou.Danfoss.co.uk](http://www.Assistyou.Danfoss.co.uk).
