NEW DEVIreg™ SMART CONNECTS INTELLIGENT FLOOR HEATING AND BUSINESS POTENTIAL

The new DEVIreg™ Smart and DEVIsmart™ App is set to revolutionise the market for electronic touch-thermostats. The intuitive DEVIsmart™ App allows end-users to operate their underfloor heating from anywhere in the world – and lets installers complete fast, trouble-free installation directly from their

smartphone. For optimum business potential, DEVIreg™ Smart is compatible with almost all electrical floor heating frames and sensors currently on the market, enabling effortless integration into existing systems.

HEATING Controls

Install directly from your smartphone

The combination of the DEVIreg Smart thermostat and the accompanying app lets customers control their underfloor heating from anywhere in the world while letting installers complete a fast and trouble-free installation directly from their smartphone. DEVIreg Smart is compatible with almost all electrical floor heating frames and sensors currently on the market, enabling easy integration into existing systems.

Building on the technology

of its predecessor, DEVIreg Touch, the Smart version offers a wide range of intelligent features including frost protection, away/vacation settings, economy

mode and weekly schedule.

The app lets installers complete the entire installation process using their smartphone, without having to connect to the customer's wifi. The multi-frame compatibility makes it especially easy to upgrade underfloor heating installations with a DEVIreg Touch. Heating settings can be copied into the new Smart simply by generating a code from the existing Touch.

Intelligent floor heating

The new DEVIreg Smart and DEVIsmart App are set to revolutionise the market for electronic touch-thermostats. The intuitive DEVIsmart App allows end-users to operate their underfloor heating from anywhere in the world and lets installers complete fast, trouble-free installation directly from their smartphone. For optimum business potential, DEVIreg Smart is compatible with almost all electrical floor heating frames and sensors currently on the market, enabling effortless integration into existing systems.

DEVIreg Smart builds on the pioneering technology of its predecessor – DEVIreg Touch – with advanced levels of functionality and a wide range of intelligent new features that bring benefits for installers and their customers. These include frost protection, away/vacation settings, economy mode and weekly schedule – all specially developed by DEVI to ensure exceptional floor heating comfort, control and energy savings.

Internet connectivity means that end-users can control their DEVIreg Smart in unlimited locations.

The DEVIreg Smart is also available in four colour versions and is supplied with a five-year warranty as standard.

Intelligent floor heating with business potential

The new DEVIreg Smart and DEVIsmart App are set to “revolutionise the market for electronic touch-thermostats,” according to intelligent electrical floor heating systems company DEVI.

DEVI explains that the DEVIsmart App allows end-users to operate their underfloor heating from anywhere in the world – and lets installers complete fast, trouble-free installation directly from their smartphone. For “optimum” business potential, DEVIreg Smart is compatible with almost all electrical floor heating frames and sensors currently on the market, “enabling effortless integration into existing systems”.

DEVIreg Smart, DEVI says, builds on the technology of its predecessor – DEVIregTouch – with advanced levels of functionality and a wide range of intelligent new features that bring benefits for installers and their customers. These include frost protection, away/vacation settings, economy mode and weekly schedule – “all specially developed by DEVI to ensure exceptional floor heating comfort, control and energy savings”.
