 Issue : March 2017

Danfoss Tphone available in handy heating efficiency packs

The Danfoss TPOne room thermostat is now available in newly upgraded Danfoss Heating Efficiency Packs (HEPs) – the handy way for installers to buy high efficiency domestic heating controls. In the new range of HEPs the existing TP5000 programmable room thermostat has been replaced by the user-friendly TPOne, which offers all the functionality and more of current TP models, including ultra-easy installation, in one all-new range. As part of the HEP upgrade Danfoss

enquiry number 131

has also swapped the RAS-C2 thermostatic radiator valve (TRV) for the stylish RTW bi-directional TRV, featuring an accurate liquid-filled sensor.

Packs are available in a choice of eight product combinations and include six TRVs and a choice of room thermostat, to suit different applications and budgets. The TPOne room thermostat is designed to suit almost any domestic heating control application, with true seven-day programming, holiday function, and offers timing for a hot water cylinder. With a highly intuitive user interface, TPOne combines fast installation and set-up wizard with one-touch controls so householders can control their heating with confidence for optimum comfort and economy. It also offers the energy saving benefits of chrono-proportional control, making it ErP Class 4. www.heating.danfoss.co.uk

All-in-one controls pack

The Danfoss TPOne room thermostat is now available in the upgraded Danfoss Heating Efficiency Packs (HEP) – a handy way to buy high efficiency domestic heating controls. In the new range of HEPs the existing TP5000 programmable room thermostat has been replaced by the user-friendly TPOne, which offers all the functionality of current TP

models, including easy installation, in one all-new range. As part of the HEP upgrade, Danfoss has also swapped the RAS-C2 thermostatic radiator valve (TRV) for the stylish RTW bi-directional TRV featuring an accurate liquid-filled sensor.

Marketing Services Manager Gareth Ash says: "Packs are available in a choice of eight product combinations, perfect for either new installations or upgrading existing. They include six TRVs and a choice of room thermostat to suit different applications and budgets. It is convenient for installers to pick a single pack of controls off the shelf, plus end users could reduce their energy consumption by as much as 40% by choosing to upgrade their controls with HEP."
