DANFOSS LINK™ - THE LATEST IN SMART HOME HEATING CONTROL

Danfoss, the heating controls manufacturer, has launched the next generation in smart heating for the home.

Danfoss Link™ is a central controller that provides convenient wireless control of the heating system, via individual electronic thermostatic radiator valves (TRV's).

Danfoss Link™ works by linking all the elements of a home's heating controls, including room sensors and Danfoss' electronic TRVs, making it perfect for larger homes or apartments where individual control is required. This latest development gives homeowners wireless, programmable control of radiators within the home.

Now, with Danfoss Link™, customers are in control from day one and can start to make immediate savings on energy use while maintaining the comfort of their home.

Danfoss Link™ is easy to programme, either by using the central controller or by the Danfoss Link App to personalise heating schedules to suit lifestyles. Individual room temperatures can be set, or rooms can be grouped together to create different heating zones.

Even better, users can control heating remotely, using the award-winning Danfoss Link App, available from the App Store and Google Play. This user-friendly App allows homeowners to create a comfortable, energy efficient home temperature wherever they are.

Danfoss has also made installation both quick and easy with information guides and videos available online. Installers can download the latest software version for their customers using the WiFi link on the central controller.

Linking it all together

Danfoss Link is a central controller that provides convenient wireless control of the heating system, via individual electronic TRVs. Said to be ideal for larger homes or apartments, the system works by linking all the elements of a home's heating controls, including room sensors and electronic TRVs, giving homeowners wireless, programmable control of radiators within the home.

Users can personalise their heating schedules to suit their lifestyles by using either the central controller or by the Danfoss Link app, available from the App Store and Google Play. Individual room temperatures can be set, or rooms can be grouped together to create different heating zones.

In addition to the end user benefits, Danfoss says it has made installation both quick and easy with information guides and videos available online. Installers can also download the latest software version for their customers using the WiFi link on the central controller.

Gareth Ash, Marketing and Technical Manager, says: "Danfoss Link is the very latest in smart heating technology. We all expect to be able to communicate, shop and play on our smartphones and tablets – now we can control our home environment, keep our bills low and reduce our energy usage too."

LINK THE RADIATORS TO WIRELESS CONTROL

Danfoss has launched Danfoss Link – a central controller that provides wireless control of a heating system through individual electronic TRVs.

The Danfoss Link works by linking all elements of a home's heating controls, including room sensors and Danfoss' electronic TRVs, making it suitable for use in larger homes or apartments where individual control is required. This gives homeowners wireless, programmable control of the radiators within the home. It also helps homeowners to make immediate savings on energy use while maintaining the comfort of their home.

Danfoss Link can be programmed using either the central controller or the Danfoss Link App. Individual room temperatures can be set, or rooms can be grouped together to create different heating zones.

Users can also control their heating remotely using the Danfoss Link app, which is available from the App Store and Google Play.

Installation has been made both quick and easy, with information guides and videos available online. Installers can download the latest software version for their customers using the WiFi link on the central controller.
